Foreword

This report, *Wisconsin Deaths, 2005*, presents key information about deaths of Wisconsin residents that occurred in 2005 and previous years. Information is included on the number and rate of deaths overall and by age, sex and cause. *Wisconsin Deaths* has been published annually since the 1995 data year, and replaced the earlier report series *Vital Statistics* (data years 1984-1994), *Public Health Statistics* (1952-1983), and *Annual Report of Morbidity and Mortality* (1948-1951).

The source of data for this report is death certificates filed with the State Registrar, Vital Records Section, Bureau of Health Information and Policy (BHIP), Division of Public Health, Department of Health and Family Services.

The Bureau of Health Information and Policy would like to recognize the following: local Register of Deeds offices and the Milwaukee and West Allis city health offices (for registering deaths), coroners and medical examiners (for certifying causes of death), hospitals and physicians (for certifying deaths), and funeral directors (for filing death certificates). We would also like to acknowledge and thank other states and countries for submitting data on deaths of Wisconsin residents that occurred in those places.

The Department of Health and Family Services produced this publication. Staff of the Vital Records Registration and Statistics Unit, Bureau of Health Information and Policy, collected and compiled the death records. Joyce Knapton prepared the report and wrote the narrative. Patricia Nametz edited the report. Draft review and comments were provided by Karl Pearson in the Bureau of Health Information and Policy. The report was prepared under the supervision of Jane Kraus, Supervisor, Registration and Statistics Unit, and John Kiesow, State Registrar, Vital Records Section; and the overall direction of Margaret Kristan, Director, Bureau of Health Information and Policy.

Death, birth, hospitalization and other health-related statistical information for Wisconsin is also available through the Internet on the Department of Health and Family Services Web site, at <http://dhfs.wisconsin.gov/stats>.

Introduction

All tables and figures in this report present Wisconsin resident data (deaths of Wisconsin residents). This means that deaths have been assigned to the area where the person lived (usually legal residence), regardless of where the death occurred. Most of the deaths reported in this publication occurred in Wisconsin, although the State Vital Records Office receives death certificates of Wisconsin residents from other states and countries as well. (Reports of deaths that occurred outside Wisconsin are thought to be substantially complete.)

Chapter 69, Wisconsin Statutes, authorizes the Department of Health and Family Services to supervise and direct the collection of death data. This statute also indicates how local registrars are to collect and file certificates for deaths that occur in their jurisdictions.

Beginning with 1999 data, causes of death have been coded using the International Classification of Diseases, Tenth Revision (ICD-10). ICD-10 replaces the ICD-9 that was used to code death data for the years 1979-1998. ICD-10 is a classification system that was developed collaboratively by the World Health Organization (WHO) and 10 international centers to reflect advances in medical science and changes in diagnostic terminology, and to promote international comparability in the presentation of mortality statistics.

A comparability table has been prepared to assist the reader in comparing numbers of deaths by cause between 1999 (and subsequent years) and the years before 1999. The table is available through the Internet on the Department of Health and Family Services Web site at: <http://dhfs.wisconsin.gov/deaths>.

Key Findings

- In 2005, there were 46,544 deaths of Wisconsin residents, 1,056 more than in 2004.
- In 2005, the Wisconsin death rate (deaths per 1,000 population) was 8.3.
- The Wisconsin death rate has been similar to the United States death rate every year since 1945.
- Age-specific death rates for males generally exceed death rates for females. However, among persons aged 80 and older, the number of female deaths is greater than the number of male deaths (even though male death rates remain generally higher). This is because many more females than males live past the age of 80.
- As a percent of total deaths, cremations increased by 13 percentage points over the past decade (from nearly 21 percent to 34 percent). Burials decreased (from about 70 percent to more than 57 percent).
- In 2005, an autopsy was performed in just 8 percent of deaths, compared with 14 percent in 1980.
- In 2005, a total of 72 deaths were reported on death certificates as due to injuries at work. This was identical to the number reported for 2004.
- As in 2004, the three leading underlying causes of death in 2005 were diseases of the heart, malignant neoplasms (cancer) and cerebrovascular diseases (stroke). These three causes of death accounted for 55 percent of total deaths among Wisconsin residents.
- Accidents were the leading underlying cause of death among males ages 1-14, 15-24 and 25-44.
- Accidents were the leading underlying cause of death among females ages 1-14 and 15-24. Cancer was the leading cause of death among women ages 25-84.
- Diseases of the heart and cancer were the two leading underlying causes of death in each race group. In 2005, diseases of the heart accounted for 20 percent of deaths among African Americans, 26 percent of deaths among whites, 19 percent of deaths among American Indians and 23 percent of deaths among Asians. Cancer accounted for 23 percent of deaths among African Americans, 24 percent of deaths among whites, 22 percent of deaths among American Indians and 20 percent of deaths among Asians.
- When looking at all male deaths combined, accidents were the third leading cause of death. They accounted for 13 percent of deaths among American Indian males, 9 percent of deaths among Asian males, 6 percent of deaths among white males, and 8 percent of deaths among African American males.
- Among females in every race group, diseases of the heart and malignant neoplasms (cancer) were the two leading underlying causes of death in 2005.
- Nineteen percent of Hispanic deaths were due to malignant neoplasms (cancer), compared to 23 percent of deaths among non-Hispanics.
- From 2004 to 2005, death rates increased for both homicide (from 2.7 to 4.2 per 100,000 population) and accidents (from 41.0 to 44.2 per 100,000 population).
- There were 15 maternal deaths in 2005, up from six in 2004 and nine in 2003. Maternal deaths are deaths attributed to pregnancy-related health conditions or events of delivery.

Notes: Rates by age and sex are deaths per 100,000 population in that age group or age/sex group. The total includes one infant death for which sex is unknown.

- Age-specific death rates generally increase with age, except that the death rate for infants (under age one) is higher than that for children in other age groups.
- Age-specific death rates for males generally exceed death rates for females. However, among persons aged 80 and older, the number of female deaths is greater than the number of male deaths (even though male death rates remain generally higher). This is because many more females than males live past the age of 80.

Notes: Population numbers may not sum to total due to rounding. Rates shown here are deaths per 100,000 population. For a map of the Department of Health and Family Services Regions, see Technical Notes, page 82. Effective with 2003 data, Vernon County is included in the Southern Region instead of the Western Region.

- In 2005, death rates ranged from a low of 768.9 per 100,000 population in the Department of Health and Family Services' Southern region to a high of 930.5 in the Northern region. Differences in the death rate by region reflect many factors, including the region's population age structure.

Note: The “residence” column indicates the number of deaths among residents of the county, regardless of where the person died. The “occurrence” column indicates the number of deaths that occurred in that county, regardless of where the person resided. Statewide totals for the two columns differ because some Wisconsin resident deaths occur outside the state, and some deaths of non-residents occur within the state.

Notes: Percents may not add to 100 due to rounding.

“Donation” means the body was donated for use in medical research and/or education.

“Entombment” means the casket is placed in an above-ground structure, such as a mausoleum.

“Unknowns” are due to reporting of Wisconsin resident deaths occurring in other states. Some states do not consistently report disposition of the body.

- As a percent of total deaths, cremations increased by 13 percentage points over the past decade (from nearly 21 percent to 34 percent). Burials decreased (from about 70 percent to more than 57 percent).

Notes: There were two deaths in 1980 and one death in 2000 for which age was unknown. These deaths are included in the total.

- In 2005, an autopsy was performed in just 8 percent of deaths, compared with 14 percent in 1980.
- The percentage of deaths with an autopsy decreased in most age groups from 1980 to 2005.

Notes: Race categories may also include people of Hispanic origin; people of Hispanic origin may be of any race. This table indicates the number of death certificates that specified that an injury at work contributed to the death, either as the underlying cause or as a contributing factor.

- In 2005, a total of 72 deaths were reported on death certificates as due to injuries at work.
- Eighty-nine percent of deaths due to injuries at work were to males.

**Map 1. Number of Infant Deaths
By County of Residence, Wisconsin 2005**

Source: Bureau of Health Information and Policy, Division of Public Health, Department of Health and Family Services.

Note: Infant deaths are those that occur before one year of age.

- Milwaukee County accounted for 31 percent of all infant deaths statewide in 2005 (and 21 percent of all births).

Note: The ICD-10 codes used for diseases of the heart are I00-I09, I11, I13, I20-I51.

- Death rates from diseases of the heart for males exceeded rates for females in all age groups.

Note: The ICD-10 codes used for malignant neoplasms are C00-C97.

- Cancer death rates for males exceeded rates for females in all age groups except 45-54, where the rates were identical.

Note: The ICD-10 codes used for cerebrovascular diseases are I60-I69.

- Death rates from cerebrovascular diseases (stroke) for males exceeded rates for females in most age groups.

Notes: The immediate cause of death is the final disease or condition resulting in death. The underlying cause of death is the disease or injury that initiated events resulting in death. All-mention cause of death includes all conditions listed on the death record, including those in the chain of events leading to death and others contributing to the death. Thus, the all-mention cause of death column will always have a higher total than the total number of deaths.

For the ICD-10 codes used for each cause, see Technical Notes, page 80.

- The underlying cause is often referred to as the “cause of death.” For example, for 10,912 Wisconsin residents who died in 2005, a malignant neoplasm was listed as the underlying cause on the death certificate. For only 9,155 residents, a malignant neoplasm was indicated as the final disease or condition that caused the person to die (immediate cause). For 11,931 residents, a malignant neoplasm contributed to death (all-mention cause).

Notes: Age-specific rates are deaths per 100,000 population in that age group. A rate is not calculated when there were fewer than 20 deaths. Underlying cause of death is the disease or injury that initiated events resulting in death.

For the ICD-10 codes used for the cause-of-death groupings, see Technical Notes, page 77, and page 78 (infants only).

Conditions abbreviated in this table are spelled out in full in the Technical Notes.

The total for 2005 includes one record for which sex was unknown.

- As in 2004, the three leading underlying causes of death in 2005 were diseases of the heart, malignant neoplasms (cancer) and cerebrovascular diseases (stroke). These three causes of death accounted for 55 percent of total deaths among Wisconsin residents.
- Although diseases of the heart constituted the leading cause of death overall, within specific age groups this category was the leading underlying cause only among persons 75-84 years and 85 years and over.
- Accidents were the leading cause of death for age groups 1-14, 15-24, and 25-44. The rate of death from accidents increased overall and in most age groups in 2005.

For the population estimates used to calculate 2004 rates, see Technical Notes, page 84. For the population estimates used to calculate 2005 rates, see the Technical Notes, page 83.

Notes: Age-specific rates are deaths per 100,000 males in that age group. A rate is not calculated when there were fewer than 20 deaths.

Underlying cause of death is the disease or injury that initiated events resulting in death.

For the ICD-10 codes used for the cause-of-death groupings, see Technical Notes, page 77, and page 78 (infants only).

Conditions abbreviated in this table are spelled out in full in the Technical Notes.

- Accidents were the leading underlying cause of death among males ages 1-14, 15-24 and 25-44.
- Suicide was the second leading cause of death among males ages 15-24 and 25-44.
- For males aged 45 and older, heart disease and cancer were the two leading causes of death. Cancer was the leading cause for men ages 45-74, and heart disease was the leading cause for men ages 75 and older.
- The death rate from accidents among males (deaths per 100,000 male population) increased in most age groups, but declined among males aged 15-24 and 85 and older.

Notes: The age/sex-specific rates are deaths per 100,000 population in that age/sex group. Underlying cause of death is the disease or injury that initiated events resulting in death. For the ICD-10 codes used for cause-of-death groupings, see Technical Notes, page 80. Conditions abbreviated in this table are spelled out in full in the Technical Notes. The total includes one death for which sex was unknown.

Notes: Underlying cause of death is the disease or injury that initiated events resulting in death. For the ICD-10 codes used, see Technical Notes, page 80. Included in the total for this table are nine male deaths and two female deaths for which race was unknown. The "All Other" category consists of three deaths where race was reported as "Hawaiian." This table excludes one death where sex was unknown.

Notes: The 2004 total includes two decedents with race reported as Hawaiian and five records for which race was unknown.
The total in 2005 includes three decedents with race reported as Hawaiian and 12 records for which race was unknown.
Also included in the 2005 total is one death where sex was unknown.
Underlying cause of death is the disease or injury that initiated the events resulting in death.
For the ICD-10 codes used for cause-of-death groupings, see Technical Notes, page 77.
Conditions abbreviated in this table are spelled out in full in the Technical Notes.

- Diseases of the heart and cancer were the two leading underlying causes of death in each race group. In 2005, diseases of the heart accounted for 20 percent of deaths among African Americans, 26 percent of deaths among whites, 19 percent of deaths among American Indians and 23 percent of deaths among Asians. Cancer accounted for 23 percent of deaths among African Americans, 24 percent of deaths among whites, 22 percent of deaths among American Indians and 20 percent of deaths among Asians.
- Accidents accounted for 5 percent of total deaths in 2005, 5 percent of deaths among whites, 7 percent of deaths among African Americans, 6 percent of deaths among Asians and 11 percent of deaths among American Indians.
- Differences in leading causes of death by race reflect differences in population age structure (as well as other factors): compared with the total state population, larger proportions of blacks and other minority groups are children and young adults.

Notes: There was one record in 2005 for which sex was unknown so the totals for males and females will not add to the totals on page 39. The total in 2004 includes two records for which race was reported as Hawaiian. There were four decedents in 2004 and nine decedents in 2005 whose race was unknown. These were included in the totals.

Underlying cause of death is the disease or injury that initiated events resulting in death.

For the ICD-10 codes used for cause-of-death groupings, see Technical Notes, page 77.

Conditions abbreviated in this table are spelled out in full in the Technical Notes.

- Diseases of the heart and malignant neoplasms (cancer) were the leading underlying causes of death in 2005 for males of all races in Wisconsin.
- When looking at all males deaths combined, accidents were the third leading cause of death.

Notes: There was one record in 2005 for which sex was unknown, so the totals for males and females will not add to the totals on page 39. The total for 2005 includes three records for which race was reported as Hawaiian. There was one record in 2004 and two records in 2005 where race was unknown; these are included in the totals.

Underlying cause of death is the disease or injury that initiated events resulting in death. For the ICD-10 codes used for cause of death groupings, see Technical Notes, page 77. Conditions abbreviated in this table are spelled out in full in the Technical Notes.

- Among females in every race group, diseases of the heart and malignant neoplasms (cancer) were the two leading underlying causes of death in 2005.
- Accidents were the third leading cause of death for African American women and American Indian women, while cerebrovascular diseases ranked third for both white and Asian women.

Note: Underlying cause of death is the disease or injury that initiated events resulting in death. The total includes one death where sex is unknown.

Technical Notes

Reporting Requirements

As specified in Chapter 69, Wisconsin Statutes, the following is a brief outline of the sequence of events that take place when a death occurs in Wisconsin:

- Within 24 hours after being notified of a death, the filing party (usually a funeral director) must present a certificate of death to the physician or medical examiner responsible for completing and signing the medical certification.
- The medical certifier has six days after pronouncement of death to return the certificate of death back to the filing party.
- Within two days after receipt of the medical certification, the filing party must present the death certificate to the registration district (local Register of Deeds or City Health Office).
- There should be no more than nine calendar days total from date of death until filing at a local office.
- The local Register of Deeds or City Health Office must transmit the death certificate to the State Registrar within ten working days (not including weekends) after its receipt from the filing party.
- State statute allows up to 21 days from the date of death for notification to the State Registrar.

International Classification of Disease (ICD-10) Codes

Causes of death for deaths that occurred in 2005 have been coded according to the World Health Organization's *International Classification of Diseases—Tenth Revision* (Geneva, Switzerland, 1992). This classification system is the current standard used by the National Center for Health Statistics. All of the cause-of-death groupings utilized in this report were recommended for state use by the National Center for Health Statistics and the World Health Organization.

Listed below are the ICD-10 codes used for ranking leading causes of death in Tables 11, 12, 13, 17, 18 and 19 (List A). Please note that different groupings are used for ranking leading causes of infant deaths (age less than one year) in Tables 11, 12 and 13 (List B).

List A

Salmonella Infections (A01-A02)
Shigellosis and Amebiasis (A03, A06)
Tuberculosis (A16-A19)
Whooping Cough (A37)
Scarlet Fever and Erysipelas (A38, A46)
Meningococcal Infection (A39)
Septicemia (A40-A41)
Syphilis (A50-A53)
Acute Poliomyelitis (A80)
Arthropod-Borne Viral Encephalitis (A83-A84, A85.2)
Measles (B05)
Viral Hepatitis (B15-B19)
Human Immunodeficiency Virus (HIV) Disease (B20-B24)
Malaria (B50-B54)
Malignant Neoplasms (Cancer) (C00-C97)
In Situ Neoplasms, Benign Neoplasms and Neoplasms of Uncertain or Unknown
 Behavior (D00-D48)
Anemias (D50-D64)
Diabetes Mellitus (E10-E14)

Note: New Department of Health and Family Services regions were established in July, 1996 and again in February 2004. Effective with 2003 data, Vernon County was included in the Southern Region instead of the Western Region. Comparisons with regional data in previous publications may therefore be affected.

Note: This table shows current life expectancy at various ages for Wisconsin's total population and for males and females. These life expectancy estimates are based on age-specific death rates that occurred during the three-year period 2003-2005.

For example, the life expectancy at birth in 2003-2005 was 79.2 years. This is the average number of years that babies born in these years would live if throughout their lives they experienced the age-specific death rates experienced in 2003-2005. For boys, life expectancy at birth was 76.6 years. For girls, life expectancy at birth was 81.6 years.
